## **DETAILED ACTION**

### ***Response to Arguments***

Applicant's arguments with respect to claims 1-7 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 102***

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Mohara et al USPN 5,342,474.

(Re claim 1) "a tape feeding system with a drive source ... being adjustable for a plurality of pitches" (figure 7). "a suppressor formed with an opening" (1 figure 11). "a control device setting a feed stop position ... closer to an edge ... smaller than a pre determined size" (figure 15-18).

(Re claim 2) "a shutter ... configured to open when the electronic component is picked" (126 figures 10 and 11).

(Re claim 3) "Control device is configured to set the feed stop position by using a head electronic component". This is performed by the operator to set the position of the control device.

(Re claim 4) "the control device sets the feed position at the center of the opening when the electronic component is larger than the predetermined size" (figure 13).

(Re claim 5) "opening is configured so that the electronic component is picked up by a suction nozzle" (13 figure 7).

***Claim Rejections - 35 USC § 103***

Claims 6 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mohara in view of Amao et al. USPN 4,951,383.

Mohara discloses the dispenser claimed in claim 1, as well as the operator setting the positioning.

Mohara does not disclose the aid of a recognition camera in the positioning process

Amao et al. teaches the use of a recognition camera to aid or automate the position adjustment for parts pick up.

It would be obvious to one skilled in the art to modify Mohara to include a recognition camera because it would allow for closer inspection of components to allow for automatic adjustment or to aid the operator in adjusting the feed stop position.
